

## Introduction

The iVvy - Microsoft Dynamics 365 integration enables users to synchronise their contacts and custom fields into Microsoft Dynamics via a two-way synchronisation.

## How it works

## Key features

- iVvy contacts are added to subscription groups in Microsoft Dynamics 365 and updated with each sync.
- Sync contact custom data for a more detailed sync between the two systems.
- No manual data maintenance. Keep your contacts up to date in both systems automatically.
- View your contacts' comprehensive email history in Microsoft Dynamics 365 from both systems.
