

## Introduction

The iVvy and Sabre CRS SynXis integration allows Venues to view their dynamic live availability, rates and inventory for accommodation, within iVvy's Group Rooms Control screen. This integration will help minimise oversold inventory and provide users with instant access to a venue's accommodation rates and inventory, expediting the quote process.

## How it works

## Key features & benefits

### Group Rooms Control

- Display your available accommodation inventory by day, for each room type in iVvy on the Group Rooms Control screen.
- Manage oversold inventory with over-sells highlighted in red.

### Booking Engine & Distribution

- Display your "starting from" pricing on your booking engine, iVvy's Marketplace and iVvy's Partner Marketplaces.
- Qualify customers before they get to your inbox by offering default pricing upfront.
- Automatically discount the standard rate based on the number of rooms.

## FAQs

### Q. Can I push bookings back into my PMS through SynXis?

A. No, SynXis doesn't have the capability to accept group bookings, so they will still need to be manually added to the PMS. iVvy is working on direct PMS integrations that will solve this.

### Q. How much does it cost?

A. \$30 / property / month (Paid annually).

### Q. Can I stop live bookings for accommodation on the Marketplace?

A. Yes. All bookings that include accommodation will still only go to RFP.

### Q. Do I have to pay Sabre as well as iVvy?

A. No, Sabre's cost for the connection is included in the monthly fee charged by iVvy.

### Q. How do I get started?

A. Get in contact with your account manager at Sabre or iVvy and we'll get the ball rolling.
